

Reproductive Medicine Associates of New Jersey

POLICY REGARDING AGE AND INFERTILITY TREATMENT

It is the policy of RMANJ that in order for a woman to pursue pregnancy with her own uterus, her initial consultation with an RMANJ physician must take place prior to her 50th birthday. Additionally, all embryo transfer cycles must be initiated prior to her 53rd birthday. If an individual or couple intends to conceive with the assistance of a gestational carrier, at least one intended parent must be under the age of 53 at the time of the initial RMANJ appointment. All embryo transfer attempts must be initiated prior to the youngest intended parent's 55th birthday.
